ENERFLEX

Integrated Turnkey Rental Solutions

Enerflex's full-cycle integrated turnkey rental solution provides you with the flexibility to continually optimize your operations while maintaining strategic control of your production assets.

Renting compression and processing solutions gives you the flexibility to exchange equipment over the life-cycle of your wells without large capital investments. Assumptions about your drilling success rates and short- and long-term decline curves are not always accurate, resulting in over- or under-built field infrastructure. Renting equipment gives you the flexibility to scale your equipment or facility up or down with minimal capital outlay – and ensure your equipment is always optimally right sized for its operating environment.

BENEFITS OF INTEGRATED TURNKEY RENTAL COMPRESSION AND PROCESSING PROJECTS

- > Reduction of project capital costs;
- > Fast, flexible, convenient, and tax-efficient;
- > Capital savings, allowing producers to focus on further field development;
- > Maintaining throughput during maintenance turn-arounds or unforeseen shut-downs;
- > Bringing new production on-stream quicker;
- > Assessing a new field's potential prior to full field development; and
- > Managing unforeseen events that leave you short of compression capacity.

Enerflex maintains and services its rental fleet, using its extensive field service branch network. This approach allows you to reduce not only your capital expenditures but field labor costs as well. Our technical team can remotely monitor the equipment's performance to provide condition monitoring. Enerflex's fleet performance exceeds 95% uptime on our contract compression equipment.

Enerflex's integrated turnkey rental solutions allows you to continually optimize your operations

while maintaining strategic control of your production assets.

Enerflex's rental equipment can be delivered and installed in your field in as little as two to four weeks, versus 26 weeks for a typical new build. We will simplify and streamline your asset management processes by getting your new compression or processing facility running smoothly and safely, followed by assuming responsibility for everything to do with the running of the facility for as long as you choose. This includes supplying the permanent, round-the-clock on-site operating team, no matter how remote the site. We will also provide custom engineered and fabricated compression, and process equipment along with complete gas plants for rent.

Leveraging our decades of rental experience and an extensive network of field locations, Enerflex provides rental coverage across the world. We have one of the largest compression rental fleets in Latin America, Canada, and the Middle East. Enerflex's equipment is designed for cost-effective global shipping.

The result is an economical and reliable operating turnkey project.

RENTAL EQUIPMENT

COMPRESSORS

- > Reciprocating (50 hp to 10,000 hp)
- > Screw (50 hp to 5,000 hp)
- > Sweet or Sour Gas Applications

PROCESS EQUIPMENT

- > Amine Sweetening Units
- > Condensate Stabilizers
- > Dehydration Units
- > Refrigeration Systems

ENERFLEX maintains an extensive line-up of rental packages including custom engineered compression and processing solutions.
