# Retrofit Solutions

Enerflex draws on its extensive experience in natural gas compression, processing, and electric power to retrofit, rebuild, and reconfigure equipment for virtually any field application. Our engineers are renowned for their ability to innovate and find the most cost-effective way to modify or upgrade your equipment to optimize the efficiency and increase uptime/production of your existing installation.

Our comprehensive, industry-leading abilities in retrofit and optimization services represent true cradle-to-grave care and support for your compression, processing, and electric power assets. No two retrofit solutions are exactly alike. Maximizing the efficiency of your installed equipment and extending its life in ways that make the most economic sense, are key aspects of Enerflex's business offering.

## PRODUCT AND SERVICE SOLUTIONS

- > Compression, Process, and Electric Power Retrofit Solutions;
- > Re-Cylindering;
- > Stage Changes;
- > Driver Change-Out;
- > Compressor Frame Change-Out;
- > Modularization;
- > Control Panel Upgrades;
- > Sweet-to-Sour Conversion;
- > Emissions Management;
- > Plant De-Bottlenecking;
- > Plant De-Commissioning;
- > Plant Turn-Around Services;
- > Engineering, Feasibility, and Optimization Studies;
- > Fleet Performance and Capacity Review;
- > Troubleshooting; and
- > Surplus Equipment Brokerage.

Our primary goal is that your equipment delivers the best possible project economics, from both a capital and operating perspective.

Enerflex's expert teams will work with you to re-cylinder your compressor to fully maximize your horsepower utilization and make your package fit for purpose once again. We can convert your compressor to a single-stage booster or add an extra stage of compression so your equipment can adapt to declining suction pressures or increasing discharge pressures. Enerflex can also perform driver change-outs to meet emission targets, as well as provide plant de-bottlenecking, de-commissioning, and turn-around services. Further, we can refurbish your surplus equipment for new applications.

Retrofitting your existing equipment is often considerably less expensive than buying a new package, plus it will be delivered in a fraction of the time. We can retrofit your equipment in the field or in one of our facilities, or provide you with a completely refurbished package – whichever best suits your needs. Enerflex's dedicated and highly trained mobile field crews are fully equipped to take care of all your retrofit needs.

We aim to maximize horsepower utilization and plant throughput by balancing costs against benefits on every project. We strive to minimize your operating costs and maximize capital efficiency.
