## **DEEP CUT TURBO-EXPANDER LPG PROCESSING FACILITY, INDONESIA**

### **LPG Facility and Expansion of the LPG Brown Field Plant**

#### **PROJECT OVERVIEW AND CHALLENGES**

Enerflex was awarded the contract for the expansion of the LPG Brown Field Plant in order to increase LPG recovery to 94%, while increasing LPG production to approximately 191 mt/d.

#### **UNIT LOCATION**

**Palembang, Indonesia**

#### **ENERFLEX SOLUTION**

Enerflex supplied equipment to expand the natural gas liquids processing and compression facility originally completed by the Company in 2006. The facility separates propane, butane and condensate from liquids-rich gas produced locally and processes the propane and butane into petrochemical - and consumer - grade LPG. The purpose of the facility is to increase the proportion of liquids recovered from the gas stream from 60% to 90-95%. Enerflex Kuala Lumpur and Jakarta offices provided engineering and commissioning services. Equipment was manufactured and provided by the Canadian and US facilities.
