## **GAS LIFT PROJECT - OFFSHORE PLATFORM, MALAYSIA**

**Efficient equipment and operations and maintenance contract led to a runtime of 98%**

### **PROJECT OVERVIEW AND CHALLENGES**

Enerflex was awarded the contract for the rental, operation and maintenance, and commissioning of two compressor packages for an offshore platform used to compress gas used for the gas lift to enhance oil production.

### **UNIT LOCATION**

**South Furious Platform Offshore NW**

### **ENERFLEX SOLUTION**

Enerflex supplied a three year rental and operation and maintenance contract for Sabah Shell. The Enerflex equipment consisted of 300 hp of high specification, custom designed Enerflex packages. This was the first offshore performance based gas compression rental project Enerflex completed in Malaysia. The project had a 98% runtime during the contract - which was a success as the customer had requested a guarantee runtime of 95%.

The order was received in March with the equipment manufactured in the United States and then shipped six months later. The equipment was then loaded onto the platform, installed, commissioned and started up eight months later.
