

ENERFLEX

The Single Source

13,000 HP COMPRESSOR STATION, BRAZIL

Enerflex's turnkey project solution significantly reduced the project's schedule

PROJECT OVERVIEW AND CHALLENGES

Enerflex was required to provide a solution that delivers fuel gas to a large power generating facility. The project required a 13,000 hp pipeline booster station to be constructed in a remote and challenging location in rural Brazil. Geographical constraints required the compressor station to be situated on a hilltop, requiring a considerable amount of grading to create a suitable space for the facility.

UNIT LOCATION

Tapinhoa, Brazil

ENERFLEX SOLUTION

The Company provided an integrated solution that included three 4,500 hp compression packages. The Company provided full civil, mechanical and electrical engineering, design, installation and commissioning on-site. The project was delivered on-time and on-budget in 210 days from purchase order to plant acceptance.
