

ENERFLEX

The Single Source

300 MMSCF/D CENTRAL PROCESSING PLANT, PAKISTAN

Enerflex's turnkey project solution ensured the project was delivered on-time and on-budget

PROJECT OVERVIEW AND CHALLENGES

The customer's requirement was to process and compress 300 mmscf/d of sweet raw gas at a remote green field location. Enerflex designed the complete project from the wellhead to the pipeline with the scope of work including the gathering system.

UNIT LOCATION

Khyber Pakhtunkhwa Province, Pakistan

ENERFLEX SOLUTION

Enerflex executed this project on a turnkey basis. The process packages included slug catchers, inlet separation, a high performance (<1 lb/mmscf/d) TEG based dehydration, J-T based dew point control, sales gas metering, condensate stabilization, compression, as well as flare and plant utilities including full office and resident facilities. A classic example of our single source delivery model benefits through clear accountability, zero interface risk and access to the full spectrum of Enerflex's strengths.
