Mississauga, Ontario, Canada

2 MW combined heat and power solution — beverage industry

Integrated turnkey energy efficient
solution installed at bottling plant
without interrupting production —
in less than 12 months.

Enerflex supplied and installed an integrated
turnkey, behind-the-fence cogeneration solution
at a bottling plant without interrupting production.
The unit produces power, hot water, and steam
using a 600V Jenbacher JMS612, which produces
2,000 kW from a 1,500 RPM engine and
1,800 RPM generator.

Enerflex provides all aspects of after-market service
ensuring an uptime guarantee.

Outcome

Enerflex designed a custom-made acoustic enclosure
to shield office space from engine noise — the office is
now quieter than it was before installation of the plant.
The result is an energy efficient solution that meets all
HSE, noise, smell, and dust construction protocols for
the food and beverage industry. The project was fast-
tracked in less than 12 months.
